Paper Title:	<b>The Need for Modular Cybersecurity in Space Systems</b>
Abstract:	As the space industry moves toward smaller, lighter and more connection-aware systems, the cybersecurity industry needs to modify some of its approaches to provide the requisite cyberdefense capability needed to protect these systems in a congested and contested environment. The author highlights innovative work in the field while offering cautionary notes on relying too much on today's commercial solutions. The author also has a recommended roadmap for space systems to achieve cybersecurity objectives.
